2-CHANNEL AMPLIFIERS  
OPERATION & INSTALLATION

*Dear Customer,*

*Congratulations on your purchase of the world's finest brand of car audio amplifiers. At Rockford Fosgate we are fanatics about musical reproduction at its best, and we are pleased you chose our product. Through years of engineering expertise, hand craftsmanship and critical testing procedures, we have created a wide range of products that reproduce music with all the clarity and richness you deserve.*

*For maximum performance we recommend you have your new Rockford Fosgate product installed by an Authorized Rockford Fosgate Dealer, as we provide specialized training through Rockford Technical Training Institute (RTTI). Please read your warranty and retain your receipt and original carton for possible future use.*

*Great product and competent installations are only a piece of the puzzle when it comes to your system. Make sure that your installer is using 100% authentic installation accessories from Connecting Punch in your installation. Connecting Punch has everything from RCA cables and speaker wire to Power line and battery connectors. Insist on it! After all, your new system deserves nothing but the best.*

*To add the finishing touch to your new Rockford Fosgate image order your Rockford wearables, which include everything from T-shirts and jackets to hats and sunglasses.*

*To get a free brochure on Rockford Fosgate products and Rockford accessories, in the U.S. call 602-967-3565 or FAX 602-967-8132. For all other countries, call +001-602-967-3565 or FAX +001-602-967-8132.*

## PRACTICE SAFE SOUND™

CONTINUOUS EXPOSURE TO SOUND PRESSURE LEVELS OVER  
**100dB** MAY CAUSE PERMANENT HEARING LOSS. HIGH  
POWERED AUTOSOUND SYSTEMS MAY PRODUCE SOUND  
PRESSURE LEVELS WELL OVER **130dB**. USE COMMON SENSE  
AND PRACTICE SAFE SOUND.

If, after reading your manual, you still have questions regarding this product, we recommend that you see your Rockford Fosgate dealer. If you need further assistance, you can call us direct at 1-800-795-2385. Be sure to have your serial number, model number and date of purchase available when you call.

The serial number can be found on the outside of the box. Please record it in the space provided below as your permanent record. This will serve as verification of your factory warranty and may become useful in recovering your amplifier if it is ever stolen.

## GETTING STARTED

Welcome to Rockford Fosgate! This manual is designed to provide information for the owner, salesperson and installer. For those of you who want quick information on how to install this product, please turn to the **Installation Section** of this manual or refer to the icons listed below. Other information can be located by using the Table of Contents. We, at Rockford Fosgate, have worked very hard to make sure all the information in this manual is current. But, as we are constantly finding new ways to improve our product, this information is subject to change without notice.

Sections marked  
**ADVANCED OPERATION**  
include in-depth  
technical information

Sections marked  
**INSTALLATION**  
include "slam dunk"  
wiring connections

Sections marked  
**TROUBLESHOOTING**  
include recommendations  
for curing  
installation problems

# **INTRODUCTION**

---

Rockford engineers designed the Punch 40x<sub>2</sub>, 60x<sub>2</sub>, 100x<sub>2</sub> and 200x<sub>2</sub> amplifiers to withstand the rugged automotive environment while delivering superior sound quality in a flexible, reliable, and efficient package. TRANS•ANA is a low voltage circuit in the preamp stage of all Punch x<sub>2</sub> amplifiers that lets the music sound crystal clear and very real, even when played at high volume levels. This is matched with TOPAZ, a unique grounding circuit used to eliminate noise problems associated with car audio systems and their installation. Flexibility is accomplished with the use of a built-in XCard. Reliability is all but guaranteed with the use of a protection circuit called NOMAD, while MOSFET and DSM (Discrete Surface Mount) technology improve amplifier efficiency. The result of these components give the Punch amplifier awesome sound quality in a "Bullet Proof" package. An explanation of these technologies, most of which are exclusively designed and patented by Rockford, are described in the Technical Design Features.

# **PUNCH AMPLIFIER ACCESSORY PACK**

---

The accessory pack shipped with the Punch 2-channel amplifiers includes the mounting hardware necessary to secure the amp to the vehicle as well as attaching the end caps.

Installation & Operation Manual

Punch Verification Certificate

- (6) Allen Head screws for speaker and power connectors
- (4) Mounting Screws for end caps
- (4) Mounting Screws for amplifier
- (1) Allen Wrench 7/64"
- (1) Allen Wrench 3/32"
- (1) ATC Inline Fuseholder (Punch 40x<sub>2</sub>, 60x<sub>2</sub>, 100x<sub>2</sub>)
- (1) AGU Inline Fuseholder (Punch 200x<sub>2</sub>)
- (1) ATC 20 Amp Fuse (Punch 40x<sub>2</sub>)
- (1) ATC 30 Amp Fuse (Punch 60x<sub>2</sub>)
- (1) ATC 40 Amp Fuse (Punch 100x<sub>2</sub>)
- (1) AGU 50 Amp Fuse (Punch 200x<sub>2</sub>)

# **TECHNICAL DESIGN FEATURES**

---

## **◆ TRANS•ANA**

**(TRANSconductance Active Nodal Amplifier)**

The **TRANS•ANA** (TRANSconductance Active Nodal Amplifier) is a circuit that allows the audio signal to pass through the amplifier at low voltage. The signal is directly level-shifted to the fixed high voltage rails via a pair of driver transistors. Signal linearity is assured by an active node formed by the drive transistors at ultrasonic frequencies. This allows amplifier performance similar to *trans•nova* which is highly stable and linear while utilizing the advantages of a non-floating power supply.

**THE RESULT:** An extended frequency bandwidth accurately supplied to the output stages of the amplifier.

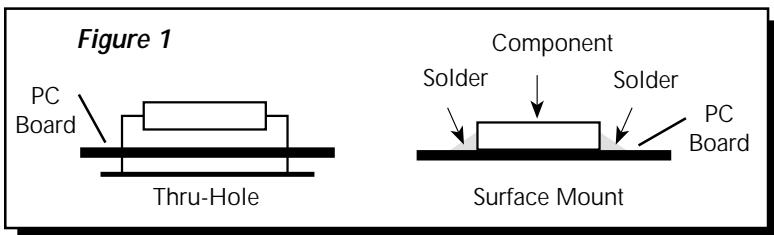

## **◆ TOPAZ (Tracking Operation Pre-Amplifier Zone)**

The **TOPAZ** (Tracking Operation Pre-Amplifier Zone) circuitry solves ground loop noise problems common to automotive amplifier design. This innovative new development allows vastly improved isolation of the input signal grounds from the power supply ground of the amplifier. This is accomplished by allowing the source unit to control the potential “environment” of the entire input structure or “zone” of the amplifier. This process improves the noise rejection of the amplifier by 30-40dB – an astounding 30-100 times better than amplifiers without TOPAZ.

**THE RESULT:** Elimination of troublesome ground loop noise between source and amplifier.

## ◆ DSM (Discrete Surface Mount) Technology

The **DSM** (Discrete Surface Mount) manufacturing process combines the advantages of both discrete components and integrated circuitry. Rockford Fosgate is the only American amplifier manufacturer to have invested millions into this process. DSM components differ from conventional discrete components in different ways. They are more compact, more rugged, and they efficiently dissipate generated heat. Using them wherever appropriate allows the advantages associated with discrete circuitry to be retained while also providing room for both highly advanced processing features and generous PC board copper paths where needed. Their short lead-out structures allow maximum audio performance and highest signal-to-noise ratios to be obtained in amplifiers of desirable package size without resorting to "amplifier-on-a-chip" shortcuts. These advantages are shown below in Figure 1.

**THE RESULT:** Fewer connections, improved reliability, shorter signal paths, superior signal-to-noise ratio and awesome sonic performance.

## ◆ XCard (Internal Crossover)

The Punch and Power amplifiers utilize internal active crossovers. These crossovers have many performance advantages such as using discrete components for exact frequency adjustments which are far superior to potentiometers. Additionally, the **XCard** can be configured for high-pass, low-pass and full range operation. With slight modifications, many crossover frequencies and slope configurations can be achieved.

**THE RESULT:** Increased system design flexibility with a precise electronic crossover without the limitations of conventional potentiometer designs.

## ◆ MOSFET Devices

Rockford Fosgate is one of the few manufacturers in the sound community to utilize MOSFET devices in both the **power supply** and the **output stages**. **MOSFET** (Metal Oxide Semiconductor Field Effect Transistor) devices offer several important inherent advantages over the 30 year old technology of bi-polar design. These advantages include: thermal stability, switching speed, ultra low output impedance and wider bandwidth linearity. In addition, MOSFETs operate very similarly to vacuum tubes in which they are more linear than bi-polar transistors. However, MOSFETs can deliver the midrange clarity without the limitations of transient response and high frequency phase shifting normally associated with tube operation.

**THE RESULT:** Operational characteristics similar to vacuum tubes without the performance limitations of tube design.

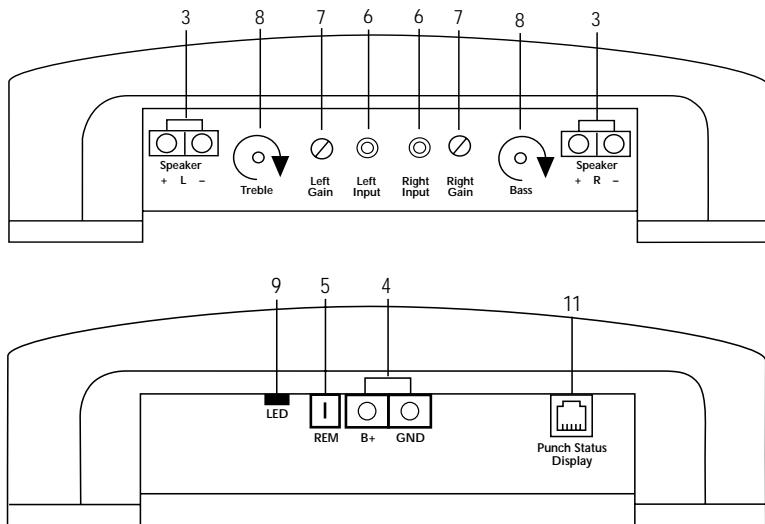

## ◆ NOMAD (NOn-Multiplying Advanced Decision)

The Punch and Power amplifiers use an **analog computer process** to maximize safe output power under all operating conditions. The innovative **NOMAD (NOn-Multiplying Advanced Decision)** system is the most sophisticated version of this technique ever used, bringing previously unavailable levels of accuracy, stability, temperature immunity and reliability to this critical process. NOMAD makes advanced decisions based on device voltages to precisely control the awesome levels of current available in the output MOSFETs to safe values – but only when absolutely needed.

**THE RESULT:** Extremely fast protection system that always protects the amplifier and never degrades the sound.

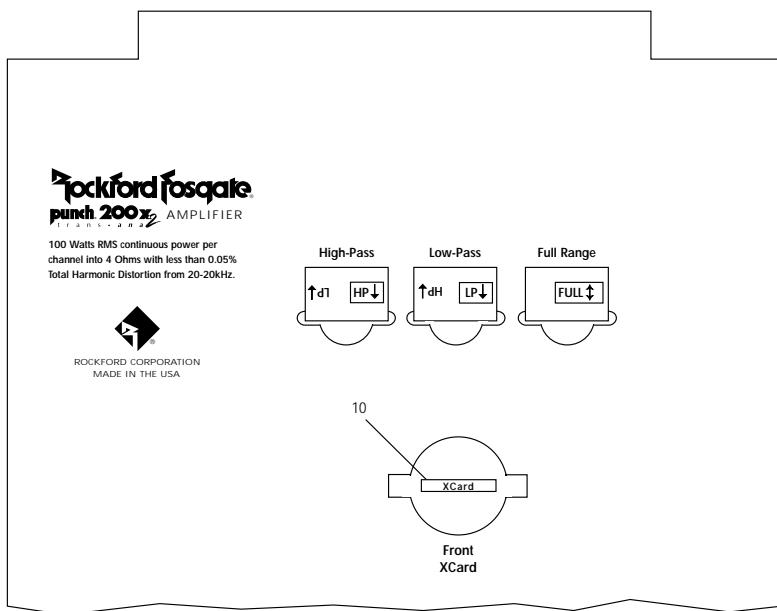

# DESIGN FEATURES

1. **Cast Aluminum Heatsink** – The cast aluminum heatsink of the Punch amplifier dissipates heat generated by the amplifier's circuitry. The inherent advantage of casting provides a 30% improvement of cooling over conventional extrusion heatsink designs.
2. **End Caps** – Interchangeable end caps conceal the wiring and input cables, giving the amplifier a clean "stealth" look.

3. **Speaker Terminals** – The heavy duty, gold-plated terminal block connectors (+ and -) will accept wire sizes from 8 AWG to 18 AWG. These gold-plated connectors are immune to corrosion that can cause signal deterioration.
4. **Power Terminals** – The power and ground connectors on the Punch amplifier are gold-plated and will accommodate up to 8 AWG wire maximizing the input current capability of the amplifier.
5. **REM Terminal** – This gold-plated spade terminal is used for the auto power/remote turn on of the Punch amplifier.
6. **RCA Input Jacks** – The industry standard RCA jacks provide easy connections for signal level input. They are gold-plated to resist the signal degradation caused by corrosion.

- 7. Input Sensitivity Controls** – The input level controls are preset for 500mV which will match the output of most source units. They can be adjusted to match input levels ranging from 150mV to 3V.
- 8. Punch Equalization Controls** – The Punch EQ helps correct for acoustical deficiencies of the listening environment. The Bass control allows a narrow band adjustment of up to 18dB centered at 45Hz. The Treble control is a wide band hinged adjustment with a maximum of 12dB at 20kHz. The Punch EQ can be bypassed by turning the controls to their minimum or counterclockwise position.
- 9. LED Power Indicator** – The LED illuminates when the unit is turned on.
- 10. XCard (Internal Crossover)** – This built-in crossover card is configurable for a multitude of operating frequencies. The orientation of the card in its socket determines the function of high-pass, low-pass, or full range operation.
- 11. Punch Status Display** – The RJ11 interface allows connection of an LED display used to monitor amplifier performance.

# **INSTALLATION CONSIDERATIONS**

---

The following is a list of tools you will need for installing the Punch amplifier:

Allen wrenches 7/64" & 3/32" (included)	Voltmeter
Wire strippers	Battery post wrench
Electric hand drill w/assorted bits	Wire cutters
17' (518.16cm) Red Power Wire	Assorted connectors
12' (365.76cm) Remote Turn-On Wire	Wire crimpers
1.5' (45.72cm) Black Grounding Wire	

This section focuses on some of the vehicle considerations for installing your new Punch amplifier. Checking your battery and present sound system, as well as pre-planning your system layout and best wiring routes will save installation time. When deciding how to lay out your new system, be sure that each component will be easily accessible for making adjustments.

Before beginning any installation, be sure to follow these simple rules:

1. Be sure to carefully read and understand the instructions before attempting to install the amplifier.
2. **For safety**, disconnect the negative lead from the battery prior to beginning the installation.
3. For easier assembly, we suggest you run all wires prior to mounting your amplifier in place.
4. Route all of the RCA cables close together and away from any high current wires.
5. Use high quality connectors for a reliable installation and to minimize signal or power loss.
6. **Think before you drill!** Be careful not to cut or drill into gas tanks, fuel lines, brake or hydraulic lines, vacuum lines or electrical wiring when working on any vehicle.
7. Never run wires underneath the vehicle. Running the wires inside the vehicle provides the best protection.
8. Avoid running wires over or through sharp edges. Use rubber or plastic grommets to protect any wires routed through metal, especially the firewall.
9. **ALWAYS** protect the battery and electrical system from damage with proper fusing. Install a fuseholder and appropriate fuse on the +12V power wire within 18" (45.7 cm) of the battery terminal.
10. When grounding to the chassis of the vehicle, scrape all paint from the metal to ensure a good, clean ground connection. Grounding connections should be as short as possible and always be connected to metal that is welded to the main body, or chassis, of the vehicle.

# **MOUNTING LOCATION**

---

The mounting location and position of your amplifier will have a great effect on its ability to dissipate the heat generated during normal operation. The design of our cast aluminum heatsink serves to easily dissipate the heat generated over a wide range of operating conditions. However, to maximize the performance of your amplifier, care should be taken to ensure adequate ventilation.

## **Trunk Mounting**

Mounting the amplifier vertically on a surface with the fin grooves running up and down will provide the best cooling of the amplifier.

Mounting the amplifier on the floor of the trunk will work but provides less cooling capability than vertical mounting.

Mounting the amplifier upside down to the rear deck of the trunk will not provide proper cooling and will severely affect the performance of the amplifier and is strongly **not** recommended.

## **Passenger Compartment Mounting**

Mounting the amplifier in the passenger compartment will work as long as you provide a sufficient amount of air for the amplifier to cool itself. If you are going to mount the amplifier under the seat of the vehicle, you must have at least 1" (2.54cm) of air gap around the amplifier's heatsink.

Mounting the amplifier with less than 1" (2.54cm) of air gap around the amplifier's heatsink in the passenger compartment will not provide proper cooling and will severely affect the performance of the amplifier and is strongly **not** recommended.

## **Engine Compartment Mounting**

Rockford Fosgate amplifiers should **never** be mounted in the engine compartment. Not only will this void your warranty but could create an embarrassing situation caused by the ridicule from your friends.

# BATTERY AND CHARGING

---

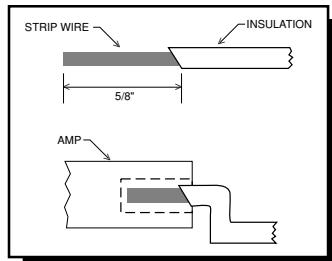

Amplifiers will put an increased load on the vehicle's battery and charging system. We recommend checking your alternator and battery condition to ensure that the electrical system has enough capacity to handle the increased load of your stereo system. Stock electrical systems which are in good condition should be able to handle the extra load of any Rockford amplifier without problems, although battery and alternator life can be reduced slightly. To maximize the performance of your Rockford Fosgate amplifier, we suggest the use of a heavy duty battery, high output alternator and an energy storage capacitor.

## WIRING THE SYSTEM

---

**CAUTION:** *Avoid running power wires near the low level input cables, antenna, power leads, sensitive equipment or harnesses. The power wires carry substantial current and could induce noise into the audio system.*

- **For safety**, disconnect the negative lead from the battery prior to beginning the installation.
1. Configure the internal XCard crossovers prior to installation. Refer to "Using the XCard" (page 12) for further information.
  2. Plan the wire routing. Take care when running signal level RCA cables to keep them close together but isolated from the amplifier's power cables and any high power auto accessories, especially electric motors. This is done to prevent coupling the noise from radiated electrical fields into the audio signal. When feeding the wires through the firewall or any metal barrier, protect them with plastic or rubber grommets to prevent short circuits. Leave the wires long at this point to adjust for a precise fit at a later time.
  3. Prepare the **Power** cable for attachment to the amplifier by stripping 5/8" of insulation from the end of the wire. To prevent the wire from fraying, strip the insulation at a 45° angle. Insert the bared wire into the B+ terminal with the long side of the insulation on the top. Bend the cable down at a 90° angle. Tighten the set screw to secure the cable in place.

### **Punch 40x<sub>2</sub>, 60x<sub>2</sub>, 100x<sub>2</sub>**

Trim the power cable to within 18" of the battery and install the protective rubber boot, which is packed with the fuseholder, over the end of the wire. Strip 3/8" of insulation from the wire and insert into the end of the fuseholder, then crimp it in place. Slide the rubber boot into place to cover the connection. Use the section of cable that was trimmed earlier and connect it to the other end of the fuseholder.

### **Punch 200x<sub>2</sub>**

Mount the fuseholder within 18" of the battery using two (2) #8 screws. Disassemble the fuseholder. You should have 2 black plastic end caps, 2 gold-plated fuse clips, a plastic spacer and the fuseholder body. Trim the amplifier power cable to reach the fuseholder and strip the wire 3/8". Slide one of the end caps over the wire (narrow end first) and insert the wire into one of the fuse clips. Tighten the set screw. Screw the black end cap to the fuseholder body to secure the cable. Use the section of cable that was trimmed earlier and connect it to the other end of the fuseholder. Install the plastic spacer in the fuseholder and attach the cable to the fuseholder body.

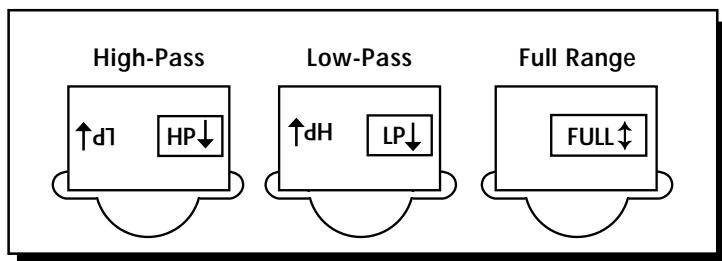

***NOTE: The B+ cable MUST be fused 18" or less from the vehicle's battery. Install the fuseholder under the hood and prepare the cable ends as stated above. Connections should be water tight.***

4. Strip 3/8" from the battery end of the power cable and crimp a large ring terminal to the cable. Use the ring terminal to connect to the battery positive terminal. **Do not install the fuse at this time.**
5. Prepare a length of cable to be used for the ground connection. Strip 5/8" of insulation from the end of the cable as described previously and connect to the appropriate terminal of the amplifier. Prepare the chassis ground by scraping any paint from the metal surface and thoroughly clean the area of all dirt and grease. Strip the other end of the wire and attach a ring connector. Fasten the cable to the chassis using a non-anodized screw and a star washer.

6. Prepare the REM turn-on wire for connection to the amplifier by stripping 5/8" of insulation from the wire end and crimping an insulated spade connector in place. Slide the connector over the REM terminal on the amplifier. Connect the other end of the REM wire to a switched 12 volt positive source. The switched signal is usually taken from the source unit's auto antenna or the accessory lead. If the source unit does not have these outputs available, the recommended solution is to wire a mechanical switch in line with a 12 volt source to activate the amplifier.
7. Securely mount the amplifier (with supplied screws) to the vehicle or amp rack. Be careful not to mount the amplifier on cardboard or plastic panels. Doing so may enable the screws to pull out from the panel due to road vibration or sudden vehicle stops.
8. Connect the source signal to the amplifier by plugging the RCA cables into the input jacks at the amplifier.
9. Connect the speakers. Strip the speaker wires 5/8" and insert into the appropriate terminal on the amplifier. Insert the bared wire into the speaker terminal and tighten the set screw to secure into place. Be sure to maintain proper speaker polarity. ***DO NOT chassis ground any of the speaker leads as unstable operation may result.***
10. Perform a final check of the completed system wiring to ensure that all connections are accurate. Check all power and ground connections for frayed wires and loose connections which could cause problems.
11. After the final inspection is complete, install the power fuse and enjoy listening. During the initial listening period, you may need to "fine tune" any phasing and level settings within your particular vehicle. To aid in this procedure, play a track with high musical content and cruise around your neighborhood. After fully evaluating the transient response of your system and making any final adjustments, all your neighbors within a 1 mile radius will assume that you have just successfully completed another upgrade to your audio system for which they will probably spill thumbtacks on your driveway.

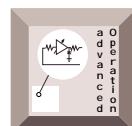

# USING THE XCARD

The crossover functions are controlled through the use of an XCard and can be set for high-pass, low-pass or full range operation. The 100Hz XCard shipped with your amplifier is set for Full Range. Each crossover card has two faces: one face operates **Full Range**, the other has arrows to indicate the edge for selecting **HP** (high-pass) or **LP** (low-pass) operation. Orient the card with the desired operating edge, indicated by the arrow, toward the socket terminals inside the amplifier. Firmly, but carefully, plug the card into the socket.

The crossover point can be altered by changing the resistor value. Use the following formula to select the appropriate resistor value to be placed on the XCard.

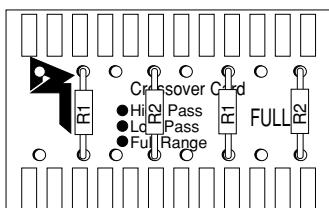

$$\frac{3386}{f_0} = R \text{ (in k}\Omega\text{)} \text{ for } .047\mu\text{f cap}$$

$$\frac{7234}{f_0} = R \text{ (in k}\Omega\text{)} \text{ for } .022\mu\text{f cap}$$

The actual formula is:

$$R = \frac{1}{2\pi f_0 C}$$

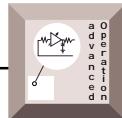

Where:  $R = \Omega$

$f_0$  = desired crossover frequency

C = capacitor in farads

ex:  $.047 \times 10^{-6}$  for  $.047\mu\text{f}$  cap

# RESISTOR CHART

Use the resistor charts below to modify the factory shipped 100Hz XCard.

**Butterworth Alignment Q = .707**  
1% resistors used with 0.047 $\mu$ F caps

Frequency	R1	R2
20Hz	169k $\Omega$	169k $\Omega$
25Hz	133k $\Omega$	133k $\Omega$
30Hz	110k $\Omega$	110k $\Omega$
35Hz	95.3k $\Omega$	95.3 $\Omega$
40Hz	84.5k $\Omega$	84.5k $\Omega$
45Hz	75k $\Omega$	75k $\Omega$
50Hz	68.1k $\Omega$	68.1k $\Omega$
55Hz	61.9k $\Omega$	61.9k $\Omega$
60Hz	56.2k $\Omega$	56.2k $\Omega$
65Hz	52.3k $\Omega$	52.3k $\Omega$
70Hz	48.7k $\Omega$	48.7k $\Omega$
75Hz	45.3k $\Omega$	45.3k $\Omega$
80Hz	42.2k $\Omega$	42.2k $\Omega$
84Hz	40.2k $\Omega$	40.2k $\Omega$
90Hz	37.4k $\Omega$	37.4k $\Omega$
200Hz	16.9k $\Omega$	16.9k $\Omega$
300Hz	11.3k $\Omega$	11.3k $\Omega$
400Hz	8.45k $\Omega$	8.45k $\Omega$
500Hz	6.65k $\Omega$	6.65k $\Omega$
600Hz	5.62k $\Omega$	5.62k $\Omega$
700Hz	4.75k $\Omega$	4.75k $\Omega$
800Hz	4.22k $\Omega$	4.22k $\Omega$
900Hz	3.74k $\Omega$	3.74k $\Omega$
1kHz	3.40k $\Omega$	3.40k $\Omega$
1.2kHz	2.80k $\Omega$	2.80k $\Omega$
2kHz	1.69k $\Omega$	1.69k $\Omega$
3kHz	1.10k $\Omega$	1.10k $\Omega$

# INSTALLATION

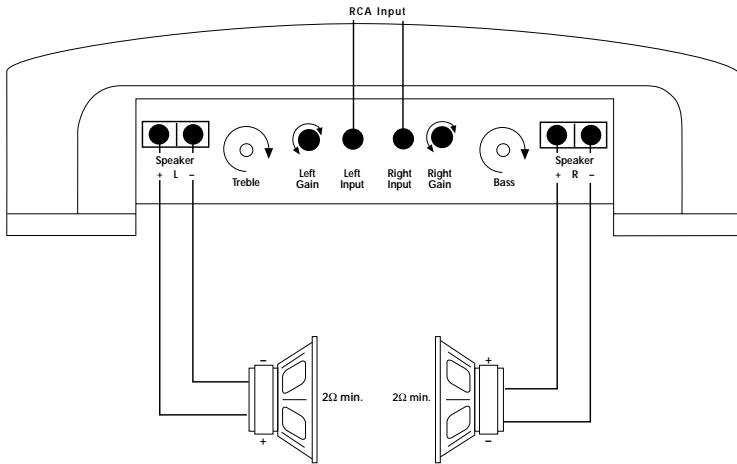

## Power Connections

\*Keep grounds as short as possible

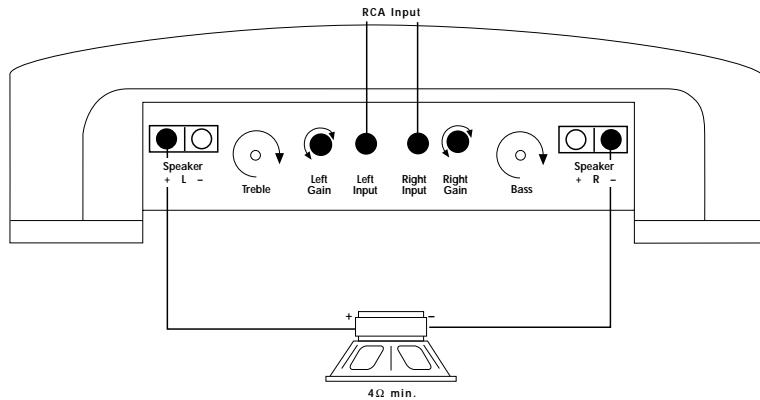

## Stereo Operation

- RCA inputs are connected to *both left and right* channels
- Gain for left and right channels operate *independently*
- **Impedance** for each channel should be *2Ω minimum*
- XCard can be set for High-Pass, Low-Pass or Full Range

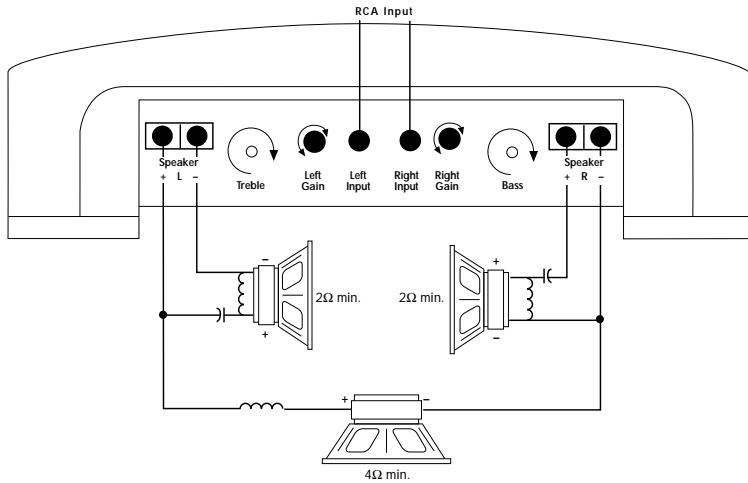

## Mono Operation

- **RCA inputs** are connected to *both left and right channels*
- **Gain** for left and right channels are *set equally* to balance the subwoofer
- **Impedance** for mono channel should be *4Ω minimum*
- **XCard** can be set for High-Pass, Low-Pass or Full Range

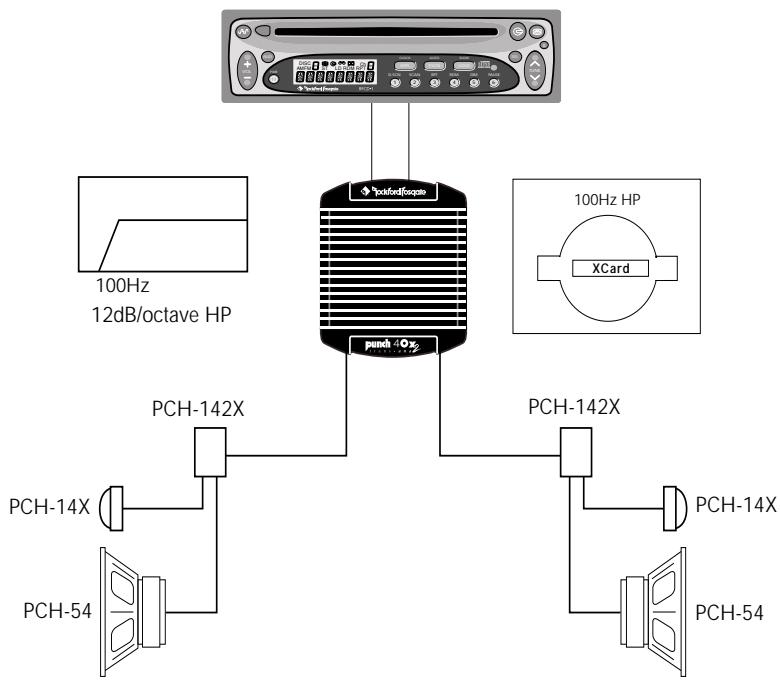

## Stereo/Mono Operation

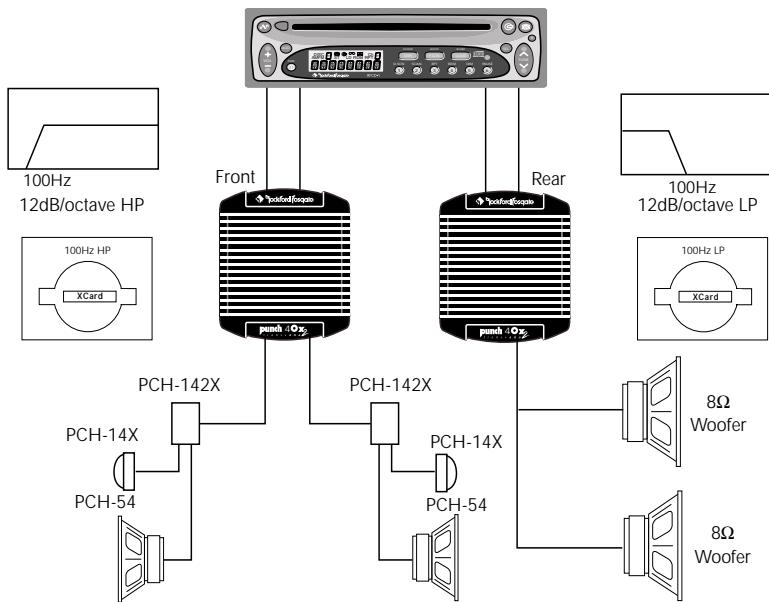

- **RCA** inputs are connected to both *left and right channels*
- **Gain** for left and right channels are *set equally* to balance the subwoofer
- **Impedance** for each channel should be *2Ω minimum*
- **Impedance** for mono channel should be *4Ω minimum*
- **XCard** are set for *Full Range*

# SYSTEM DIAGRAMS

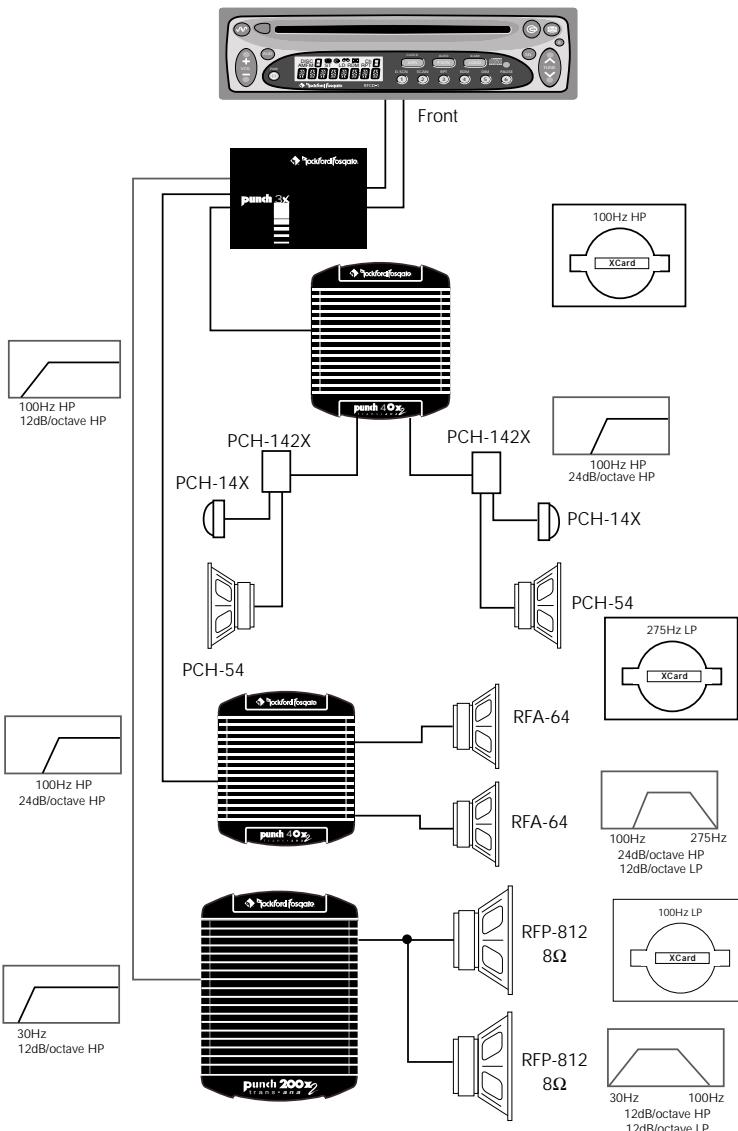

## 2-Way System

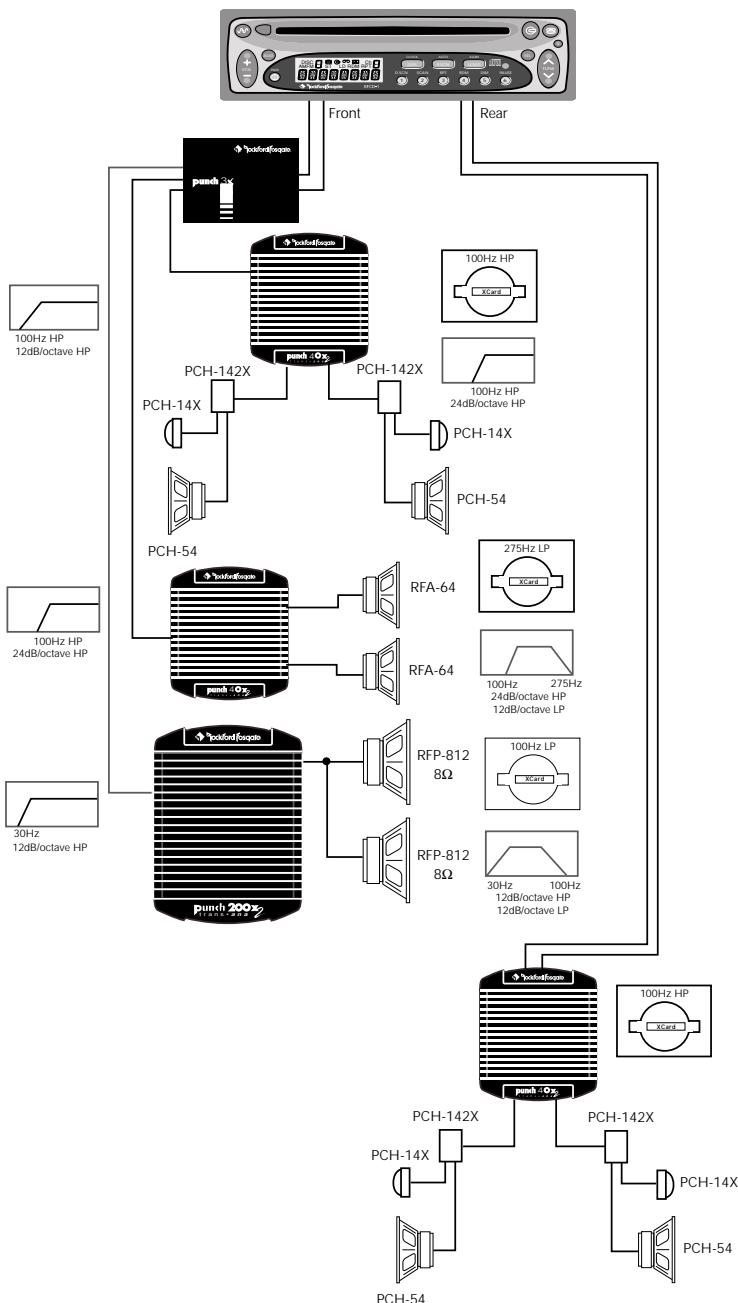

## 3-Way System

## 4-Way System

## 4-Way System w/Fadable Rear Stage

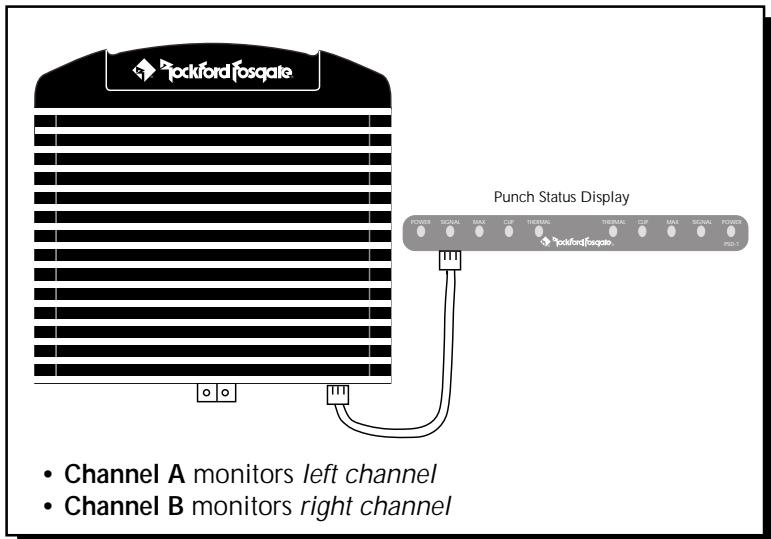

# **ROCKFORD FOSGATE ACCESSORIES**

## **Punch Status Display (FG-PSD)**

The Punch Status Display is an LED array which monitors amplifier performance. The PSD is a 2-channel monitor which has an indicator for Power, three indicators for Signal Level (signal-max-clip), and an indicator for Thermal condition. The display is designed to be stackable for multiple amplifier monitoring.

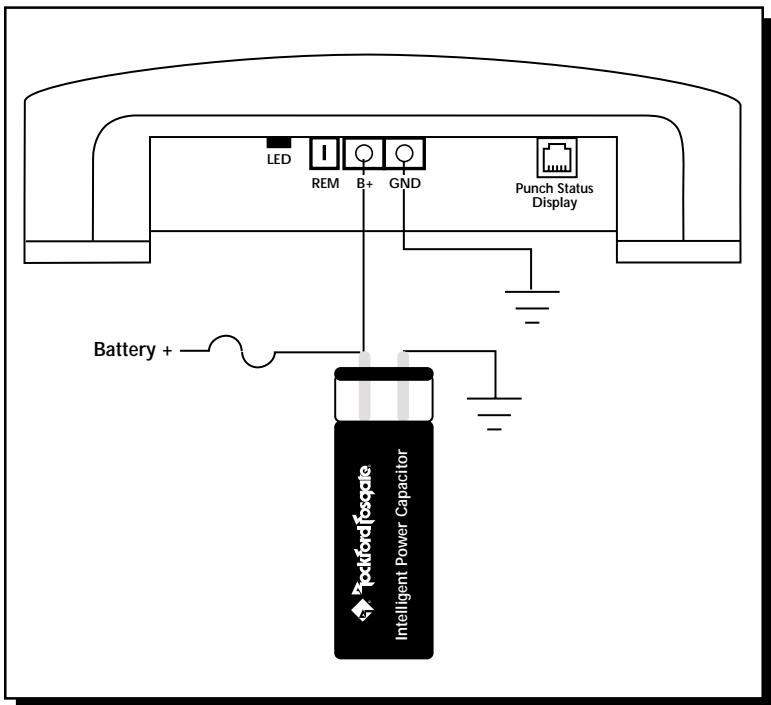

- Channel A monitors *left channel*
- Channel B monitors *right channel*

***ATTENTION: We recommend your Authorized Rockford Fosgate Dealer install your new accessory.***

## Energy Storage Capacitors

The Punch capacitors are used to provide extra current needed by amplifiers to reproduce musical transients. The Punch Caps also have the natural ability to filter AC ripple caused by the alternator, reducing the chance of noise in the system. The Punch Caps are available in a variety of values and will maximize both the sound quality and performance that Rockford Fosgate amplifiers can deliver.

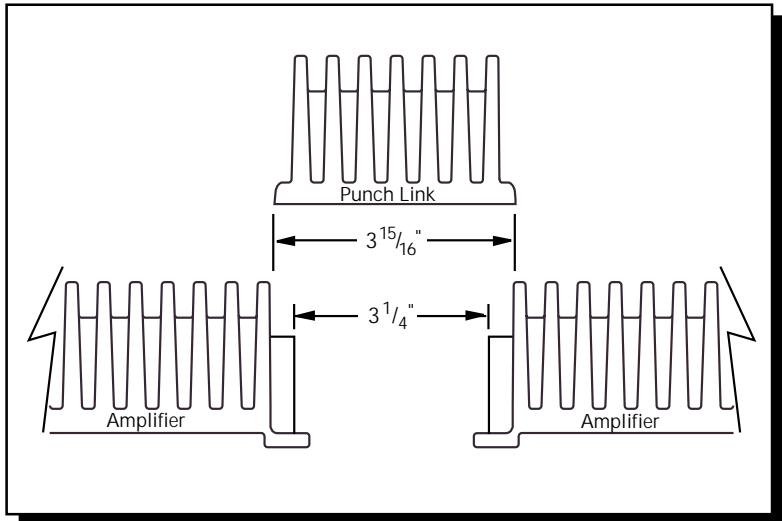

- Recommended capacitance is 1 farad per 1000 watts

***ATTENTION: We recommend your Authorized Rockford Fosgate Dealer install your new accessory.***

## Punch Link (FG-LINK)

The Punch Link is a specially cast heatsink interconnect which allows you to join any of our current Punch or Punch Power amplifiers together. While providing additional cooling through the coupling process, the Punch Link adds the finishing touch by giving you the look of one awesome amplifier.

- **Amplifier Spacing** is  $3\frac{15}{16}$ " (10cm) between heatsink fins

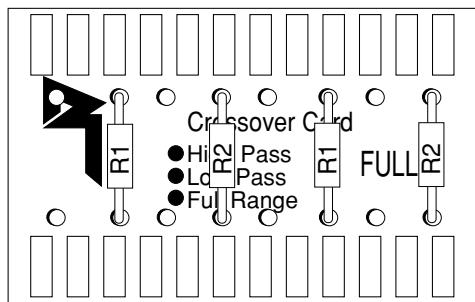

***ATTENTION: We recommend your Authorized Rockford Fosgate Dealer install your new accessory.***

## XCard Crossovers

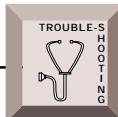

Additional crossover card frequencies are available for specialized requirements. You can get the following XCards from your Authorized Rockford Fosgate Dealer.

XM50	=	50Hz	XM275	=	275Hz
XM70	=	70Hz	XM400	=	400Hz
XM100	=	100Hz	XM4.5k	=	4,500Hz
XM150	=	150Hz	XM6.5k	=	6,500Hz
XM200	=	200Hz	XM00	=	Blank card for custom crossover

**ATTENTION:** We recommend your Authorized Rockford Fosgate Dealer install your new accessory.

# **TROUBLESHOOTING**

Symptom	Diagnosis	Remedy
<b>Amplifier does not turn on</b> (Power LED is off)	Voltage applied to the REM terminal of the amplifier is not between 10.5 and 15.5 volts or there is no voltage present.	Check the alternator, battery, fuse, and wiring and repair as necessary. If the voltage is above 15.5 volts, have the electrical system inspected by an authorized car service center.
	Voltage to the B+ terminal of the amplifier is not between 10.5 and 15.5 volts or there is no voltage present.	Check the alternator, battery, fuse, and wiring and repair as necessary. If the voltage is above 15.5 volts, have the electrical system inspected by an authorized car service center.
	Amplifier is not properly grounded.	Check wiring and repair as necessary.
<b>Amplifier has no sound</b> (Power LED is on)	RCA Input from source unit is not connected or not functioning properly.	Check connections, substitute with known working source and cables and repair or replace as necessary.
	XCard is missing or not placed properly in crossover slots.	Check XCard position and repair or replace as necessary.
	Speaker leads are shorted to each other or to the chassis of the vehicle.	Disconnect existing speakers and test with known working speakers and wires. If amplifier plays, check and repair wiring and installation of speakers as necessary.
	Speakers are defective.	Disconnect existing speakers and test with known working speakers. If amplifier plays, check and repair speakers as necessary.

Symptom	Diagnosis	Remedy
<b>Speaker Output Low or Distorted</b>	Input gain signal for amplifier is incorrectly set.	Readjust input gains of amplifier.
	Source unit output too low or source unit has no output.	Check system with known working source and repair or replace original source as needed.
	XCard is missing or not placed properly in crossover slots.	Check XCard position and repair or replace as necessary.
	Low battery voltage or large voltage drops to the amplifier under load.	Check the alternator, battery, fuse, and power and ground wiring. Repair as necessary.
<b>Amplifier Noise (Turn-on Pop)</b>	Voltage spike from output of preceding component is entering amplifier through input signal.	Disconnect input signal to amplifier and turn amplifier on and off. If noise is eliminated, connect REM lead of amplifier to source unit with a delay turn-on module.
	Voltage spike from remote turn-on lead is entering through REM input terminal.	Use a different 12 volt source for REM lead of amplifier. (i.e., battery direct) If noise is eliminated, use a relay to isolate amplifier from noisy turn-on output.

Symptom	Diagnosis	Remedy
Engine Noise	Noise is radiating into RCA signal cable.	Check connections, run the RCA cables on a different route away from sources of high current.
	Bad component in the signal chain.	Check connections, bypass additional components (crossovers and equalizers) between the source unit and the amplifier. Connect one component at a time to determine the culprit. Repair or replace components as necessary.
	Noise is radiating into speaker cables.	Disconnect existing speakers and connect a test speaker to the output terminals of the amplifier. If noise is gone, reroute the speaker cables away from sources of high voltage.
	Multiple grounds in the audio system.	Check ground connections and connect amplifiers, signal processors, and other components to a central location or try a different grounding point on the chassis.
	Ground loop between source unit and antenna.	Check connections, disconnect antenna from source unit. If noise is gone, install an antenna ground loop isolator.

- If noise persists, see your Authorized Rockford Fosgate Dealer.

# **DYNAMIC POWER MEASUREMENTS**

---

## **About the Dynamic Power Measurements**

The Audio Graph PowerCube is a test instrument used to measure the output of an amplifier in accordance with IHF-202 industry standards. The IHF-202 standard is a dynamic power measurement and was developed as a means of measuring power in a manner that best represents the Real World operation of an amplifier. Many manufacturers, including Rockford Fosgate, at times will measure amplifier power into a fixed resistor (4 ohm, 2 ohm). While this method is useful in some types of evaluation and testing, it is not representative of an amplifier that is connected to a speaker and playing music.

## **Music**

Music is dynamic; the sound waves are complex and constantly changing. In order to simulate this, the IHF-202 standard calls for the input signal to the amplifier to be a 1kHz bursted tone. This signal is input (on for 20 milliseconds) and reduced 20dB for 480 milliseconds. The signal is gradually increased in level until the amplifier's output exceeds 1% Total Harmonic Distortion (THD). At 1% distortion becomes audible, therefore, any power produced above that level is considered *unusable*. Many manufacturers represent their amplifiers' output power in excess of 10% distortion. They use many names for this measurement, such as Total Maximum Power or Maximum Output Power. This is not indicative of the *actual usable output power*.

## **Listening to Loudspeakers - Not Resistors**

A loudspeaker is not a resistor. A resistor's value (resistance measured in ohms) is fixed. A loudspeaker's impedance is dynamic. It is constantly changing in value, dependent upon the frequency of the input signal. Therefore, measuring power with the amplifier loaded into a 4 ohm resistor is not the same as measuring power with the amplifier connected to a 4 ohm speaker. Most people do not listen to music through a resistor.

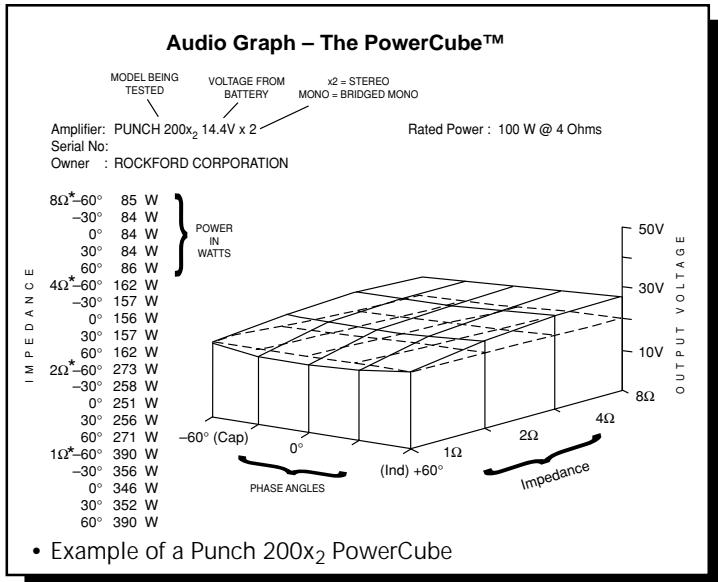

A 4 ohm speaker may experience a drop in impedance 4-6 times lower than its nominal (printed) impedance. A speaker will also create phase shifts in the signal that is passed through it. These phase shifts happen because a speaker is an inductor (voice coil) and a capacitor (compliance of the surround/spider), as well as a resistor (voice coil wire).

To simulate a speaker the Audio Graph PowerCube measures output power into 20 different loads. It tests at 8 ohms, 4 ohms, 2 ohms and 1 ohm. Each of these impedances is also tested at  $-60^\circ$ ,  $-30^\circ$ ,  $0^\circ$ ,  $+30^\circ$  and  $+60^\circ$  phase angles. These different impedances and phase angles represent the shifts in impedance and phase that can occur in a typical loudspeaker.

## Information Cubed

The data acquired in the testing procedure is then graphed in the form of a 3-dimensional cube, hence the name **PowerCube**.

The *Phase Angle* is expressed on the horizontal axis, the *Output Voltage* is presented on the vertical axis and the *Impedance* is displayed on the Z axis. *Output Power*, in watts, is listed on the left hand side for each impedance at each phase angle.

## What is an Amplifier?

An amplifier by definition is a voltage generating device, recreating the signal which is input to it identically but with increased volume. It will be connected to a reactive load (the speaker). The impedance of this load and phase of the signal passing through the load will vary, dependent upon the frequency of the input signal (music).

Therefore, a perfect amplifier will be able to maintain the same output voltage regardless of load characteristics and will not alter the signal it is reproducing. A perfect amplifier when measured by the Audio Graph PowerCube would present data that forms a perfect cube. Unfortunately, amplifiers are not perfect. The laws of physics generally prevent it. A great amplifier is about the best one can hope to attain.

As you can see by the PowerCube and as you will experience by listening, your Punch amplifier is a GREAT AMPLIFIER!

## **SPECIFICATIONS**

---

	PUNCH 40x <sub>2</sub>	PUNCH 60x <sub>2</sub>	PUNCH 100x <sub>2</sub>	PUNCH 200x <sub>2</sub>
Dynamic Power Rating (IHF-202 Standard) - Measured at 14.4 Volts				
Mono into a 4Ω Load	175 Watts	270 Watts	400 Watts	500 Watts
Per channel into a 2Ω Load	80 Watts	135 Watts	200 Watts	250 Watts
Per channel into a 4Ω Load	60 Watts	80 Watts	120 Watts	150 Watts
Continuous Power Rating (Competition Standard) - Measured at 12.6 Battery Volts				
RMS continuous power <b>per channel</b> , both channels driven into a 4Ω load from 20 to 20,000 Hz with less than 0.05% Total Harmonic Distortion (THD)	20 Watts	30 Watts	50 Watts	100 Watts
RMS continuous power <b>per channel</b> , both channels driven into a 2Ω load from 20 to 20,000 Hz, with less than 0.1% Total Harmonic Distortion (THD)	40 Watts	60 Watts	100 Watts	200 Watts
RMS continuous power mono into a 4Ω load from 20 to 20,000 Hz, with less than 0.1% Total Harmonic Distortion (THD)	80 Watts	120 Watts	200 Watts	400 Watts
Signal-to-Noise Ratio				> 100dB A-weighted

	PUNCH 40x <sub>2</sub>	PUNCH 60x <sub>2</sub>	PUNCH 100x <sub>2</sub>	PUNCH 200x <sub>2</sub>
Dimensions	9-5/8" (24.4cm) W 9-5/8" (24.4cm) L 2-5/8" ( 6.6cm) H	9-5/8" (24.4cm) W 10-5/8" (27.0cm) L 2-5/8" ( 6.6cm) H	9-5/8" (24.4cm) W 11-5/8" (29.5cm) L 2-5/8" ( 6.6cm) H	9-5/8" (24.4cm) W 12-5/8" (32.0cm) L 2-5/8" ( 6.6cm) H
Bandwidth	10Hz to 200kHz ±3dB	>200	20Hz to 20kHz ±.05dB / 10Hz to 100kHz ±1.0dB	
Damping Factor @ 4Ω (at output connector)				
Frequency Response				
Slew Rate		50 Volts µs		
IM Distortion (IHF)		<0.05%		
Input Sensitivity			Variable from 150mV to 3V	
Protection			Preset at the factory for 500mV	
Battery Fusing Rates (External to Amplifier)	20 amps	30 amps	40 amps	50 amps
Fuse Type	ATC	ATC	ATC	AGU
Equalization			Bass: +18dB Maximum at 45Hz	Treble: +12dB Maximum at 20kHz
Input Impedance				20k ohms
				Specifications are subject to change without notice.

# **WARRANTY INFORMATION**

---

Rockford Fosgate warrants all electronics to the original consumer/purchaser to be free from defects in materials or workmanship for a period of three (3) years. We will cover parts and labor provided the product was purchased from an Authorized Rockford Fosgate Dealer. This warranty does not apply to any product on which the seals and/or serial number have been broken, removed, tampered with, defaced or altered in any manner. This warranty only applies to the original consumer/purchaser and is not transferable.

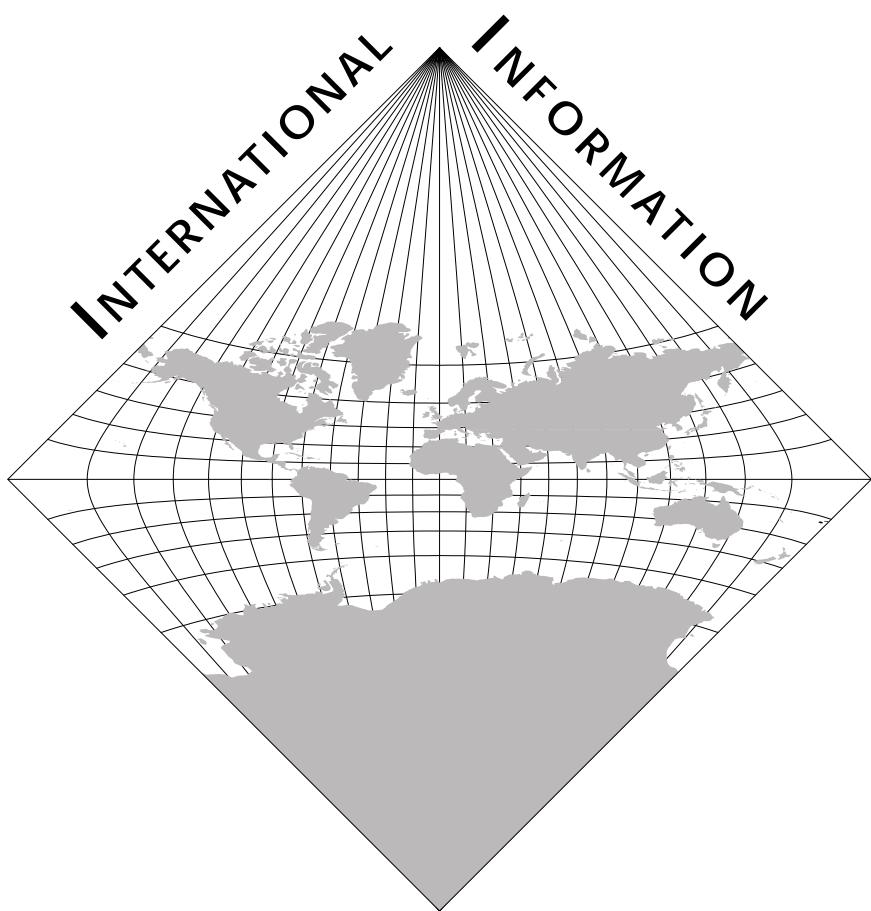

Electronics found to be defective during the warranty period will be repaired or replaced at Rockford Fosgate's discretion. Repaired or replaced electronics will be covered by the balance of the original warranty period only. Rockford Fosgate shall not be responsible for any incidental or consequential damages resulting from a defect in electronics. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the previous limitation may not be applicable.

The warranty does not cover any appearance item, any cost or expense related to the removal or reinstallation of the product, any accessory used in conjunction with the product, damage to the product resulting from alteration, accident, misuse or abuse, or improper installation. This warranty does not apply if the parts or labor, which would otherwise be provided without charge under this warranty, are obtained from any source other than Rockford Fosgate or an Authorized Rockford Fosgate Service Center.

This warranty is the only express warranty and does not create any implied warranties. Rockford Fosgate limits its obligations under any implied warranties under state laws to a period not to exceed the written warranty period. Some states do not allow limitation on how long an implied warranty lasts, so the above limitation may not apply. This warranty applies only to products sold in the United States of America or its possessions. For warranty outside the U.S.A., please contact the nearest Authorized Rockford Fosgate Dealer. This warranty gives the consumer specific legal rights, and the consumer may have other rights which vary from state to state.

A defective product must be shipped prepaid to the Authorized Rockford Fosgate Dealer from which the consumer purchased the product or to the Rockford Fosgate factory in Tempe, Arizona in the original factory carton or equivalent. Any shipping loss or damage will be borne by the consumer or the consumer's shipper. A consumer returning a product to the factory must call (800) 669-9899 for a Return Authorization Number. All shipments shall be clearly marked with the Return Authorization Number on the outside of the shipping carton.

Ship to:  
Rockford Corporation  
Warranty Repair Department  
2055 E. 5th Street  
Tempe, AZ 85281 U.S.A.  
Return Authorization Number: \_\_\_\_\_

**LEA DETENIDAMENTE LAS SIGUIENTES INSTRUCCIONES DE INSTALACION DEL PRODUCTO. EVITARA POSIBLES DAÑOS A VD., AL VEHICULO O AL PRODUCTO.**

## **INTRODUCCION**

---

Los ingenieros de Rockford han diseñado los amplificadores Punch x<sub>2</sub> para ofrecer en el difícil entorno de un automóvil una calidad de sonido superior en un producto flexible, fiable y eficiente. Trans•ana es un circuito de baja tensión en la etapa de preamplificación de los amplificadores Punch x<sub>2</sub> que permite que la musica suene limpia y cristalina y muy real, incluso a altos niveles de audicion. Esto se complementa con el TOPAZ, un circuito exclusivo de masa utilizado para eliminar los ruidos asociados con las instalaciones de car-audio. La flexibilidad esta garantizada con el uso de la XCard incorporada. La fiabilidad se refuerza con el uso de un circuito de proteccion llamado NOMAD, mientras que los MOSFET y la tecnologia DSM (montaje discreto en superficie) aumentan la eficiencia del amplificador. La combinacion de todos estos componentes dan al amplificador Punch una impresionante calidad de sonido en un chasis discreto. Mas adelante encontrará mas explicaciones de todas estas tecnologías, la mayoría de ellas usados en exclusiva y patentadas por Rockford.

## **UBICACIÓN PARA EL MONTAJE**

---

### **Montaje en el Maletero**

Monte el amplificador verticalmente con las líneas del radiador orientadas de arriba hacia abajo. De esta manera conseguira la mejor ventilacion.

### **Montaje en el Compartimento de Pasajeros**

El montaje en el compartimento de pasajeros sera eficiente en funcion de la ventilacion que tenga el amplificador. Si va a instalar el amplificador bajo un asiento deberá dejar al menos 2.5cm libres sobre la carcasa del amplificador.

### **Instalacion**

Por seguridad, desconecte el terminal negativo de la bateria antes de comenzar la instalacion.

### **Terminal B+**

El cable B+ debe ir provisto de un fusible a una distancia no mayor de 45cm de la bateria. Prepare el cable e instale el portafusibles en el compartimento del motor. Las conexiones han de ser impermeables.

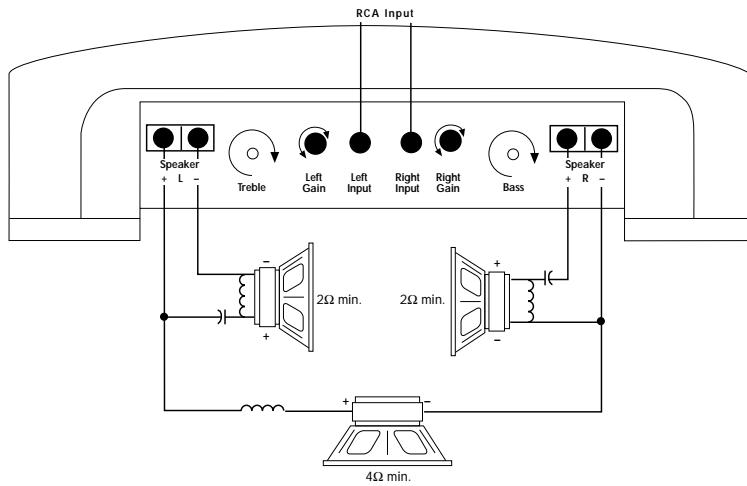

## Terminal GND

Prepare un trozo de cable para usarlo como toma de masa. Prepare un punto de masa en el chasis rascando y eliminando la pintura de la superficie de metal y limpielo de toda suciedad asegure el cable al chasis con un tornillo.

## Terminal REM

Conecte el cable REM a un punto de +12V conmutable. La señal se suele coger de la salida auto antena del radio cassette si este no tiene salida remote.

### Funcionamiento Estereo/Mono

- Las entradas **RCA** se conectan a ambos *canales izquierdo y derecho*.
- Las **ganancias** izquierda y derecha han de *ajustarse igual* para ambos canales.
- **La impedancia** minima para cada canal debe ser  $2\Omega$ .
- **La impedancia** minima mono debe ser  $4\Omega$ .
- **XCard** en *Full Range*
- Debe usarse un **filtro pasivo** para la configuracion estereo/mono.
- **No llevar a masa ningun cable de altavoz.**

**ATTENTION: Veuillez lire les instructions suivantes pour l'installation de cet amplificateur. Ne pas les suivre pourrait causer des blessures ou endommager le véhicule.**

## **INTRODUCTION**

---

Les ingénieurs de Rockford Fosgate ont conçu l'amplificateur Punch x2 pour supporter l'environnement rude de l'automobile en délivrant une qualité de son supérieure dans un ensemble efficace, fiable et flexible. Trans•ana est un circuit de bas voltage dans l'étage de préamplification de tous les amplificateurs Punch x2 qui reproduit un son musical clair comme du cristal et très réel, même à très haut volume. Ceci est accompagné du TOPAZ, un circuit unique employé pour éliminer les problèmes de bruits parasites associés aux systèmes audiomobile et leur installation. La flexibilité est assurée par l'emploi d'une XCard incorporée.

La fiabilité est garantie grâce au circuit de protection NOMAD, la technologie MOSFET et DSM (Composants Montés en Surface) améliorent l'efficacité de l'amplificateur.

L'ensemble de ces atouts donne à l'amplificateur Punch une qualité de son inégalable sous une carrosserie "pare-balles."

Vous trouverez de plus amples informations sur ces technologies, exclusivement conçues et brevetées par Rockford, dans la rubrique technique.

## **MONTAGE**

---

### **Montage dans le coffre**

Monter l'amplificateur verticalement avec les rainures de haut en bas ce qui lui permet de refroidir plus facilement.

### **Montage dans l'habitacle**

Monter l'amplificateur dans l'habitacle ne pose aucun problème, du moment qu'il y ait assez d'air pour le refroidir. Si vous montez l'ampli en dessous du siège, prévoyez 3 cm d'air autour du radiateur.

### **Installation**

Pour votre sécurité, déconnectez la borne négative de la batterie du véhicule avant de commencer l'installation.

### **Terminal B+**

Il est impératif qu'il y ait un fusible sur le câble pour la connexion à la masse. Préparez le châssis en grattant la peinture de la surface métallique et nettoyez la saleté et l'huile. Attachez le câble au châssis avec une vis.

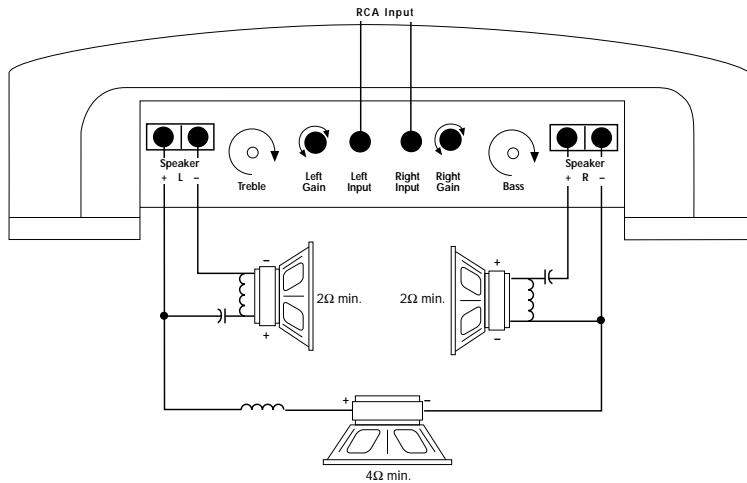

## Terminal GND

Préparez une longueur de câble pour la connexion à la masse. Préparez le châssis en grattant la peinture de la surface métallique et nettoyez la saleté et l'huile. Attachez le câble au châssis avec une vis.

## Terminal REM

Connectez le fil REM à une commande 12 volts positive de la source. La commande 12 volts est habituellement prise sur la sortie antenne électrique de la source ou la commande accessoire. Si la source ne dispose pas de ces sorties, nous vous recommandons d'installer un interrupteur qui fournira un positif 12 volts au REM de l'amplificateur.

### Opération stéréo/mono (tri mode)

- Les entrées **RCA** sont connectées aux canaux gauche et droit
- Les **Gains** des canaux gauche et droit sont réglés de la même manière pour équilibrer le subwoofer
- L'**impédance** de chaque canal devrait être de minimum  $2\Omega$
- L'**impédance** du canal mono devrait être de minimum  $4\Omega$
- Les **XCard** sont introduites sur full range
- Il est conseillé d'utiliser les filtres passifs lorsqu'on fait fonctionner l'amplificateur en tri-mode
- ***NE connecter AUCUN des câbles HP à la masse au risque d'un fonctionnement instable***

**BITTE LESEN SIE DIESE GEBRAUCHSANLEITUNG ZUERST SORGFÄLTIG DURCH. DAS KANN SIE VOR DEM FALSCHEN EINSATZ, AUSFALLEN ODER SOGAR BESCHÄDIGUNG DES PRODUKTES ODER IHRES FAHRZEUGES SCHÜTZEN.**

## **EINLEITUNG**

---

Rockford Ingenieure haben die Punch x<sub>2</sub> Verstärker entwickelt. Mit höchstem Technologie-Standart, hervorragender Klangqualität, einfacher Handhabung und bester Servicefreundlichkeit Trans•ana ist eine Nieder-Volt Schaltung im Vorverstärkerteil aller Punch x<sub>2</sub> Verstärker die für kristallklaren Klang auch bei sehr hohen Lautstärken sorgt. TOPAZ, eine einzigartige Erdungsschaltung verhindert und unterdrückt Einstreuungen und Störungen die nur allzu oft Car Audio Systeme beeinträchtigen. Flexibilität durch die Vielfalt der Aktivweiche mit ihren XCards, lange Lebensdauer durch die Schutzschaltung NOMAD und der Einsatz von MOSFET Transistoren und DSM (Discrete Surface Mount), machen diese Verstärker so effizient. Das Ergebnis all dieser Komponenten machen Punch-Verstärker so einzigartig und in ihrer Klangqualität nahezu unschlagbar. Eine genauere Beschreibung dieser Technologien, die größtenteils einzigartig und von Rockford patentiert sind, finden Sie unter Technical Design Features.

## **EINBAUORT**

---

### **Im Fahrzeugkofferraum**

Der vertikale Einbau der Endstufen, das bedeutet, daß die Kühlrippen von oben nach unten verlaufen, gibt dem Verstärker die beste Kühlung.

### **Auf der Beifahrerseite**

Sollte der Verstärker auf der Beifahrerseite montiert werden, so ist es sehr wichtig, für eine ausreichende Kühlung zu sorgen. Sollte der Verstärker z.B. unter dem Beifahrersitz montiert werden, sollte dem Kühlkörper mindestens ein Luftspalt von 3 cm bleiben, um so für eine ausreichende Kühlung zu sorgen.

### **Einbau**

Zur Sicherheit klemmen Sie den Negativ-Pol der Batterie während des gesamten Einbaues ab.

### **B+ Anschluss**

Die Plus-Leitung MUß ca. 40 cm nach dem Plus-Pol der Batterie abgesichert sein. Preparieren Si die Kabellängen und montieren Sie den Sicherungshalter im Motorraum. ALLE Verbindungen müssen wasserdicht sein.

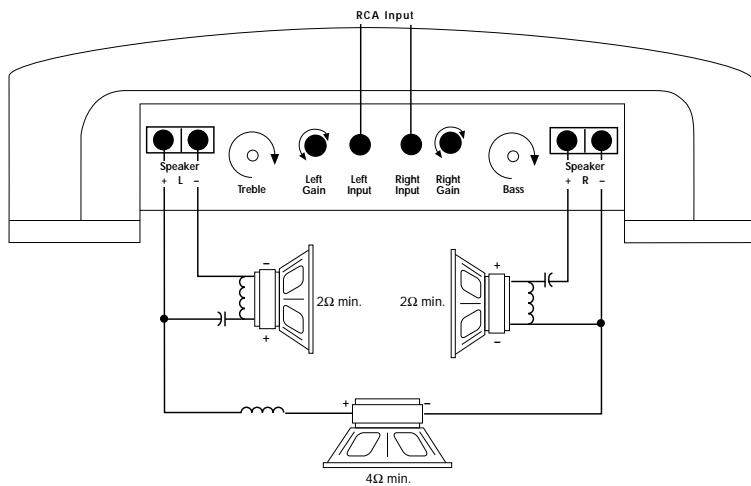

## GND Anschluss

Preparieren Sie Ihr Kabel für die Negativ Leitung (Erdung). Preparieren Sie die Anschlußstelle des Erdungskabels, indem Sie das Metall gründlich reinigen und vom Lack befreien. Befestigen Sie nun die Erdung an dieser Stelle mit einer Schraube.

## REM Anschluss

Verbinden Sie das Ein-und Ausschaltungskontroll-Kabel mit Ihrem Radio (12 Volt positiv). Normalerweise verwenden Sie hierfür die Ant.-Remote Ihres Radios oder ein eigens dafür vorgesehenes Kabel (Amp-Remote). Sollte Ihr Radio diesen Anschluß nicht besitzen, so verwenden Sie eine 12 Volt Spannung, die Sie durch einen Schalter ein- und ausschalten können.

### Stereo/Mono Operation

- Chinch Eingänge des *rechten- und linken-Kanals* anschließen
- **Gain -Kontrolle** gleich stellen um das Signal des Subwoofer anzugeleichen.
- Die **Impedanz** für jeden Kanal sollte *minimum 2 Ohm* betragen.
- Die **Impedanz** des Mono Kanals sollte *minimum 4 Ohm* betragen.
- Die **Aktivweichen-Module** sollten auf jeden Fall im Stereo/Mono Betrieb verwendet werden.
- **Vermeiden Sie auf jeden Fall eine Erdung der Lautsprecher-Kabel, da sonst ein einwandfreier Betrieb nicht garantiert werden kann.**

**ATTENZIONE: SI PREGA DI LEGGERE LE SEGUENTI ISTRUZIONI PER L'INSTALLAZIONE DI QUESTO PRODOTTO. IL NON SEGUIRLE POTREBBE RISULTARE SERIAMENTE DANNOSO PER LA PERSONA O PER IL VEICOLO.**

## **INTRODUZIONE**

---

Gli ingegneri Rockford hanno progettato la serie di amplificatori Punch x2 per resistere all'ostico ambiente automobilistico mentre suonano con una musicalità superiore, offrendo un insieme versatile, affidabile ed efficiente. Trans•ana è un circuito a bassa tensione dello stadio preamplificatore del Punch x2 che permette al suono di essere cristallino e reale anche in presenza di volumi molto elevati...tutto questo è accoppiato TOPAZ, un esclusivo circuito di massa impiegato per eliminare i problemi di rumore comunemente presenti negli impianti car audio. Il massimo della versatilità è raggiunto con l'impiego delle XCard. L'affidabilità è completamente garantita dall'impiego di un circuito di protezione chiamato NOMAD, mentre l'uso di MOSFET e della tecnologia DSM (Discrete Surface Mount) permette di raggiungere efficienze elevatissime. Il risultato finale di tutte queste tecnologie moderne è che gli amplificatori Punch suonano meravigliosamente e sono indistruttibili, a "prova di proiettile." Una spiegazione di queste tecnologie innovative, molte coperte da brevetti Rockford, sono descritte in un'altra sezione di questo manuale.

## **DOVE POSIZIONARLO**

---

### **Nel Bagagliaio**

Montando l'amplificatore su una superficie in verticale con le alette direzionate dall'alto verso il basso si garantirà un miglior raffreddamento dell'amplificatore.

### **Nell'abitacolo**

Montare l'amplificatore nell'abitacolo si avrà un funzionamento regolare se si garantisce un flusso d'aria sufficiente. Per l'installazione sotto un sedile, è necessario avere uno spazio di almeno 3 cm attorno a tutto l'amplificatore.

### **Installazione**

Per sicurezza, scollegare il polo negativo della batteria dell'auto prima di iniziare l'installazione.

### **Terminale B+ (cavo positivo)**

Il cavo positivo deve essere protetto da un fusibile a non più di 45 cm dalla batteria. Terminare il cavo e installare il fusibile nel vano motore. Tutte le connessioni devono essere a prova d'acqua.

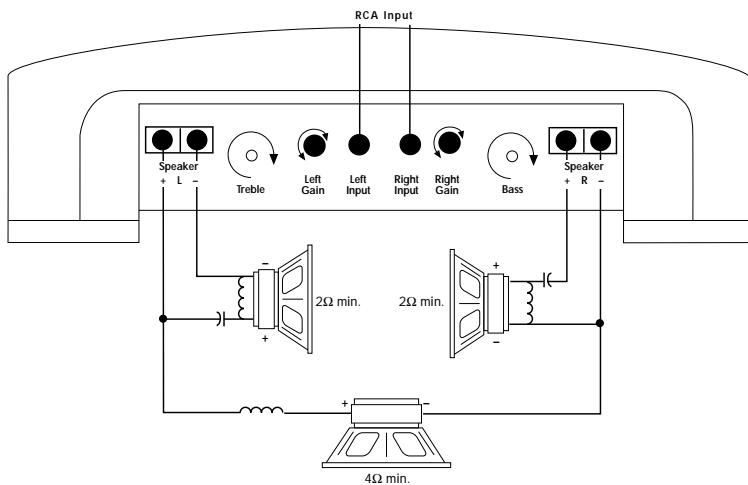

## Terminale GND (cavo negativo)

Decidere la lunghezza del cavo e terminarlo. Preparare la massa grattando la vernice dal telaio dell'auto ed eliminando tracce di olio o sporco. Fissare il cavo di massa al telaio con una vite.

## Terminale REM (Consenso di accensione)

Collegare il cavo REM ad un positivo presente solo ad autoradio accesa (normalmente il cavo pilota dell'antenna elettrica o il cavo accessori dell'autoradio). Se la sorgente non dovesse essere equipaggiata con queste uscite, la soluzione raccomandabile è di inserire un interruttore su un cavo positivo e connettersi all'amplificatore.

### Stereo/Mono Operation

- Ingressi **RCA** collegati sia al canale destro sia al sinistro
- **Gain** (controllo di sensibilità) regolati in modo identico per bilanciare il subwoofer
- L'**impedenza** di ciascun canale deve essere minimo  $2\Omega$
- L'**impedenza** per il canale mono deve essere minimo  $4\Omega$
- La scheda **XCard** deve essere in posizione Full Range
- Nel funzionamento Stereo/Mono simultaneo devono essere impiegati i crossover passivi
- **Non cortocircuitare a massa nessun cavo degli altoparlanti, potrebbe portare ad un funzionamento irregolare**

## **NOTES**

---

## **NOTES**

---

### **MADE IN THE USA**

This product is designed, developed and assembled in the USA by a dedicated group of American workers. The majority of the components used in the construction of this product are produced by American companies. However, due to the global nature of their manufacturing facilities and the loudspeaker parts industry in general, some parts may be manufactured in other countries.
